Curtains and Curtain Rails

Ceiling mounted curtain rail • A300–600

Curtains are generally in combination with class dividers or other furnishings and protect access to dedicated areas of the aircraft like galley working area, door etc. With additional padding they can also provide more privacy for e.g. executive compartments in the cabin.

Pleated Curtains

Pleated curtains are permanently pleated and therefore easy to handle. The best suitable fabric is Trevira CS available from many fabric manufacturers.

The recommended pleat pitch is 70mm, on request the pitch can be customized.

Curtain rails, hooks, inserts, and curtain tieback can be provided in one package. As the grade of customizing is high, a technical co-ordination is necessary covering aircraft interfaces, curtain dimensions, and direction of right side of fabric, position and type of press- studs or hooks.

Not offering standard solutions, Innovint can support installation by establishing a Service Bulletin and co-ordinate together with its partners (EASA 21J approved design organisation).

Standard curtain

Reinforced pleated and shaped curtain • A319CJ
